

## Calf Puller Assembly Instructions

### Step 1

Slide lever mechanism onto the tube exactly as shown. It may require some pressure to slide it past the plastic bush.

### Step 2

Inset rump frame spigot into the plastic bush and push fully home.

This can be done by hand or by using the lever mechanism and rope as shown in Step 3.

### Step 3

Loop a rope around the rump frame, as shown, and attach the lever mechanism.

Use the lever mechanism to pull the spigot fully onto the bush. This is best done with the calf puller standing upright and pulling down on the lever while twisting the frame back and forwards to work it into the bush.
