

Lifter Assembly Instructions

Step 1

Match coloured end of the screw with the nut marked in the same colour.
This is the right hand thread end.
Start the screw into the nut, two turns.

Step 2

Now align the other end of the screw with the nut and, while holding the nut firmly, continue turning the screw in the same direction to start the thread. Continue turning the screw until the handle can be attached.

Step 3

Use the handle to wind the screw the rest of the way through.
